

## Case Study 4: Linux Administration Training & Interview Preparation

### Client

Individual Learners (Freelance Training)

### Challenge

Students and entry-level engineers needed practical skills in Linux administration and guidance for technical interview readiness to boost their career opportunities.

### Solution

- Delivered hands-on training in Linux system administration (user management, shell scripting, file systems, permissions, and networking basics).
- Provided real-world scenarios to strengthen problem-solving and troubleshooting skills.
- Conducted 1-on-1 interview preparation for Linux-focused technical roles, including mock interviews and Q&A guidance.

### Results

- 4 students successfully gained practical Linux administration skills.
- 1 student was able to confidently attend interviews and improve performance.
- Positive feedback highlighted clear explanations, practical labs, and personalized mentoring.
